

DIT-06 Introduction to Computer Programming using C

Unit 1: Introduction to Programming

Basic definition of Pseudo Code, algorithm, flowchart, program, Elementary data types, variables, constants and identifiers. Integer, character floating point and string constants, Variable declarations. Syntax and semantics. Reserved word Initialization of variable during declarations, Symbolic Constants.

Unit 2: Operators Expressions

Expression in C, Different types of Operators: Arithmetic, Relational and Logical, Assignment Conditional, Increment and decrement, Bitwise, Comma and Other operator(Sizeof period etc)., Precedence and associativity of operators, type casting.

Unit 3: Decision and Control Structures

Various input/output functions like scanf, getch, getchar, printf, putchar. Conditional Statement if, if-else, for, switch, other Statement- break, continue, goto. Concept of Loop while, do-while, for, nested loops.

Unit 4: Strong Class

Automatic, External, Static, Register, Scope and lifetime of variables. Macro, Preprocessor directive.

Unit 5: Functions

Function: function declaration, function definition, function call(Call by value, Call by reference) Formal and Actual Parameter, Recursive function.

Unit 6: Structures and Unions

Structure declarations, definitions, array of structure, pointers to structures, Union definition, declaration use Enumerated data types, defining your own types(typedef).

Unit 7: Arrays and Pointers

Array: 1-Dimensional array, 2-Dimensional array and its declaration, String, Pointers- Declaration Passing pointer to a function, Pointer and One-dimensional Arrays, Dynamic Memory Allocation.

Unit 8: File Handling

File: Opening, Closing, reading and writing of files. Seeking forward and backward. Examples of file operation programs
